The Search Button in the keyboard is superfluous

Package:

Device: Emulator, Pixel 4a and S105G

Android API: 30 & 29

Description:

A User may expect that button to run the search, when in fact the search is run by entering text. This may give the impression that the search isn't running correctly if the user enters a bad search term

Expected Behaviour:

The Button just isn't needed

Reproduction Steps:

Just running a search you can see the button is unneeded

The Search does not allow the partial mid string terms

Package:

Device: Emulator, Pixel 4a and S105G

Android API: 30 & 29

Description:

The Search functionality does not work great. It only matches Hospitals names if the String entered matches from the start of the String.

E.g

University Hospital (Coventry)

Will only be found with searches that start: University

Not with the word Coventry.

Expected Behaviour:

A User should be able to run a partial search if they don't know exactly how the name of the hospital starts

Reproduction Steps:

1. Open App
2. Click Search
3. Enter the Word 'Coventry'
4. No results shown
